CS Security Job Aids

ℹ️ Purpose: A tool for colleges to help them understand what combination of security settings are recommended for a user in a particular job description. Job titles and what each user does that has a particular college can vary college to college. These guides attempt to provide guidance about the necessary security settings based on what each user 'does' (job duties) in their position at your college.

The role groupings are meant as additive, meaning if someone fulfills multiple job duties, a combination of security settings are needed to grant that necessary access to perform this work.
